

SMART VIEW VENTURES

SMART VIEW VENTURES

A foundation for an IIoT solution with the flexibility to customize specific features and functionality.

SMART VIEW VENTURES

Building Blocks are:

- **Applications** – pre-built, grouped building blocks based on use cases, that accelerate digital transformation and drive time-to-value
- **Connectors** – enable access to data from disparate devices and systems
- **Domain model** – a conceptual model of the domain that incorporates behavior and data
- **Business logic** – encodes real-world business rules that determine how data can be created, stored, and changed
- **UI elements** – a library of control elements used to construct the graphical user interface for customization and extension of application functionality

Platform Capabilities

- **Connect** disparate devices and applications to enable access to multiple data sources
- **Build** complete IIoT solutions and augmented reality (AR) experiences quickly and easily
- **Analyze** complex industrial IoT data for real-time insights, predictions and recommendations
- **Manage** the performance of connected devices, processes, and systems
- **Experience** and engage with physical objects in a more contextualized, actionable way
